

Baptiste Mastery Course Document

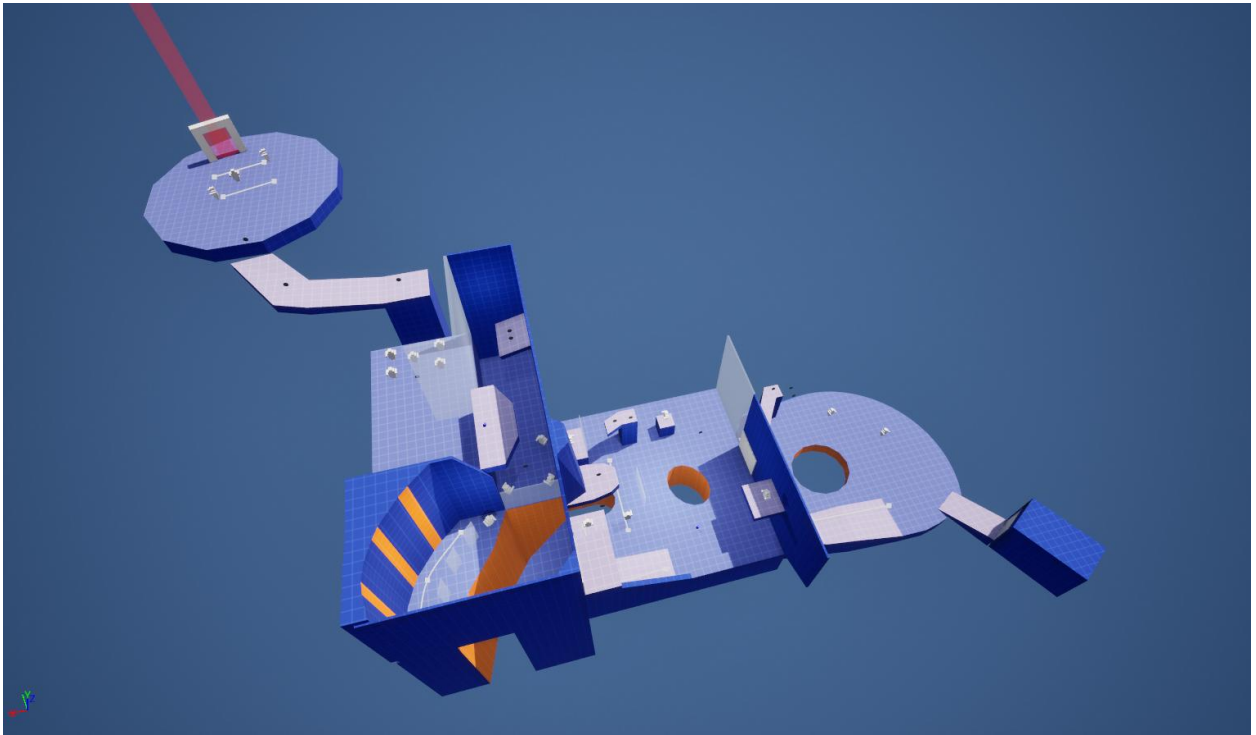

Made by Bassam Masarwa for Redhill Games

Introduction

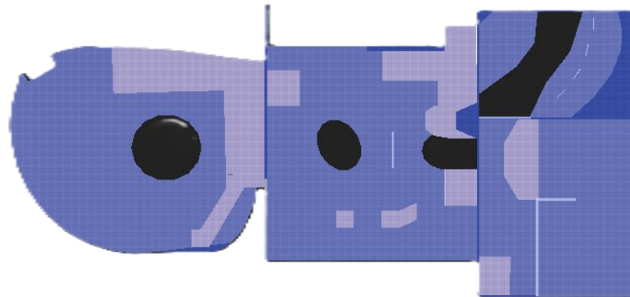

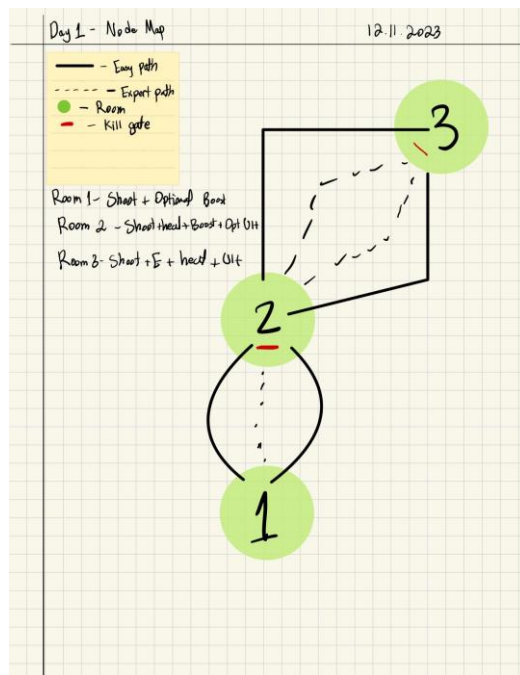

The intended difficulty of this level is the easiest of the 3 difficulties present in Overwatch 2. Baptiste mastery level was built around key pillars based on playing the current existing mastery levels in Overwatch 2, the behaviour of the target audience in Overwatch 2 when it comes to gameplay & the mechanics of Baptiste. These pillars are as follows:

- Elevation
 - The level must force the player to use elevation as path finding & to their advantage in combat.
- Equilibrium
 - The level must teach the player when to save their teammate and when to fight their enemy.
- Tactical
 - The level must present the player with tactical opportunities of when to use each ability most effectively.

Every area in the map invokes all these 3 pillars, some are prioritized over others depending on the goal of each area, and some areas combine all 3 to give that tight experience of playing Baptiste.

Initial topdown/node map

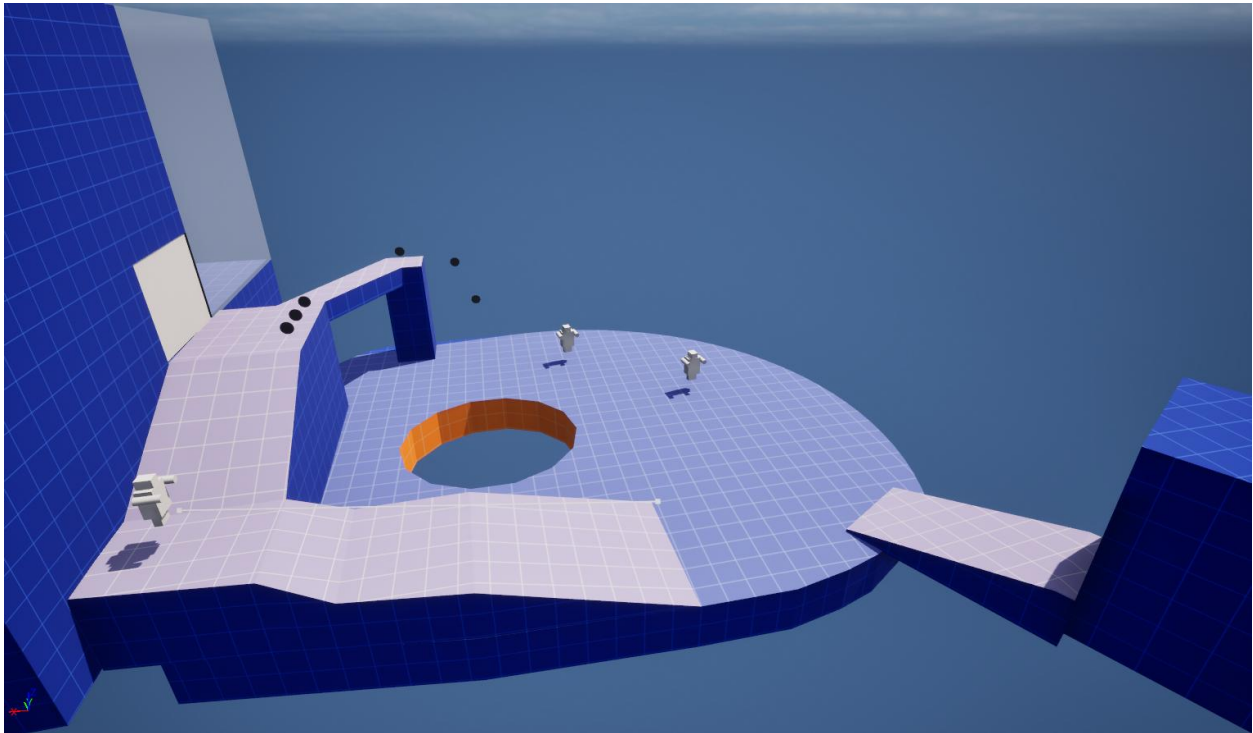

Level Breakdown

This section of the document will break down the main areas of the level and what each area provides to the player.

Room 1

Pillars invoked in this room by priority:

- Tactical
 - Since baptiste has 2 healing abilities some of the bots are placed perfectly for Shift ability use but not great for just Right Click heal, this can teach the player on repeat runs to effectively use these abilities accordingly.
- Optional: Elevation
 - There is a secondary path in this level that makes it faster to go through if the player uses the boost jump ability.

The first room of the level focuses on 2 main aspects as soon as the gate opens:

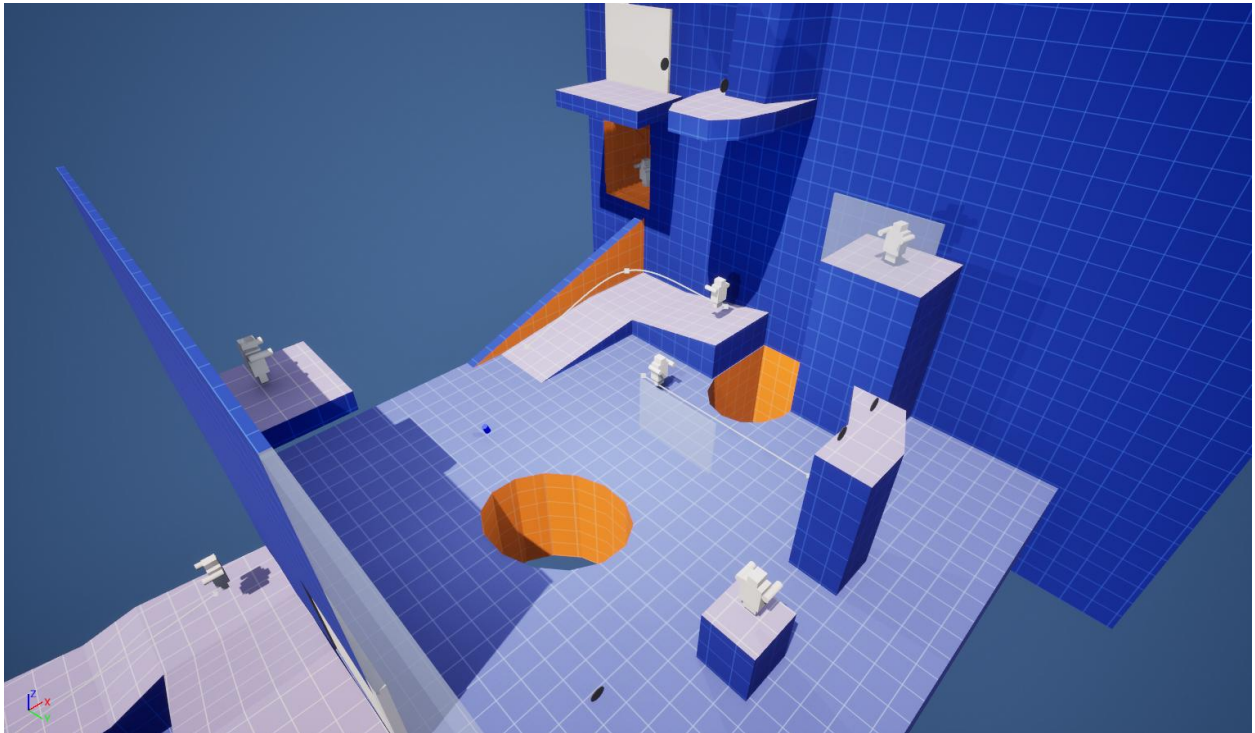

- The goal of this area is presented calmly with 3 allied bots who are in need of healing, this tells the player their first goal.
- In the distance the player can see the finish line elevated way above, this can already prepare the player that they are going to climb their way to the end using some sort of elevation.

Room 2

Pillars invoked in this room by priority:

- Equilibrium
 - The room presents 2 goals, killing an enemy bot that is a direct threat shooting at you when you enter, and healing your allies. Players must choose how to proceed most effectively.
- Elevation
 - The room forces the player to use elevation to proceed and efficiently to clear the room using cover and height to do multiple actions such as shooting and healing.
- Optional: Tactical
 - This room has an ultimate pickup that can present the player with an angle to use it against 3 enemies at the same time.

The second room of the level immediately presents these problems to be solved using Baptiste's kit & what the hero's capabilities are:

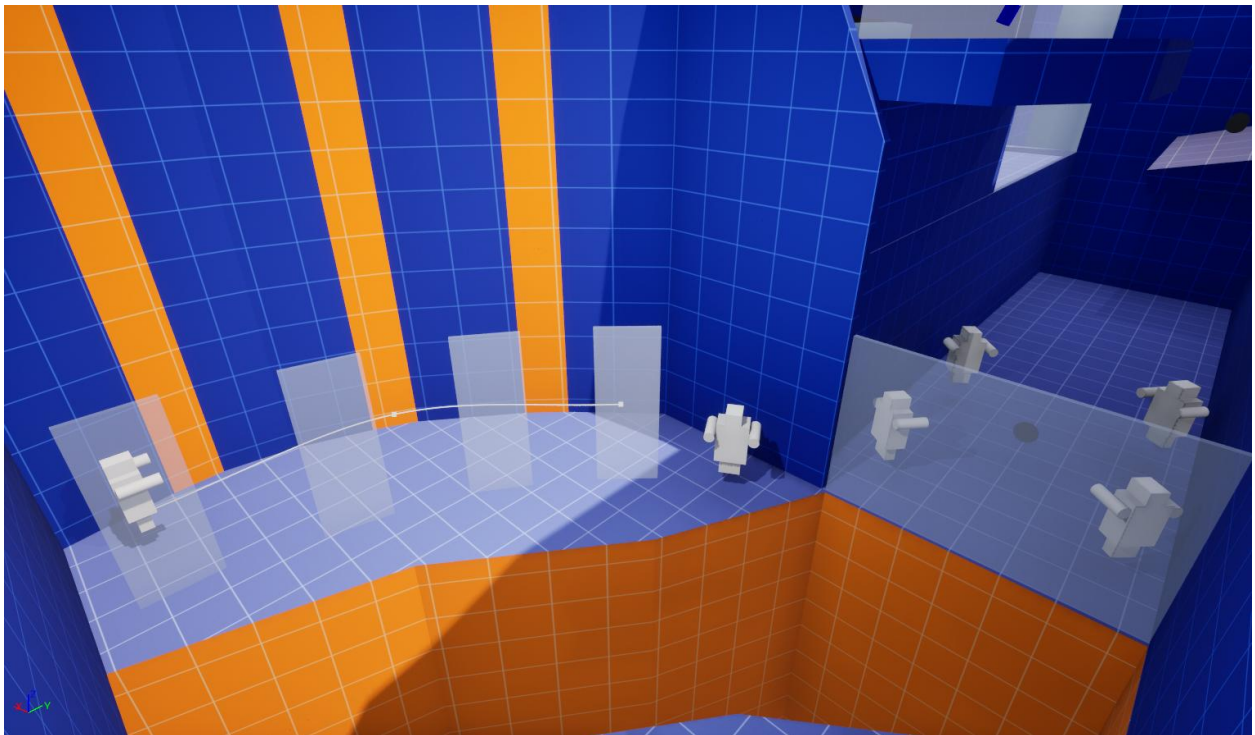

- Combat, Baptiste is a highly aggressive support that can do a lot of damage, this is shown in this room by having multiple enemies to eliminate.
- Healing from a distance, Baptiste has the ability to heal his teammates from any distance as long as there is a sight line.
- Mobility, baptiste can combine the first 2 points while being highly mobile vertically, this makes the player understand when using this vertical movement that they are harder to hit.

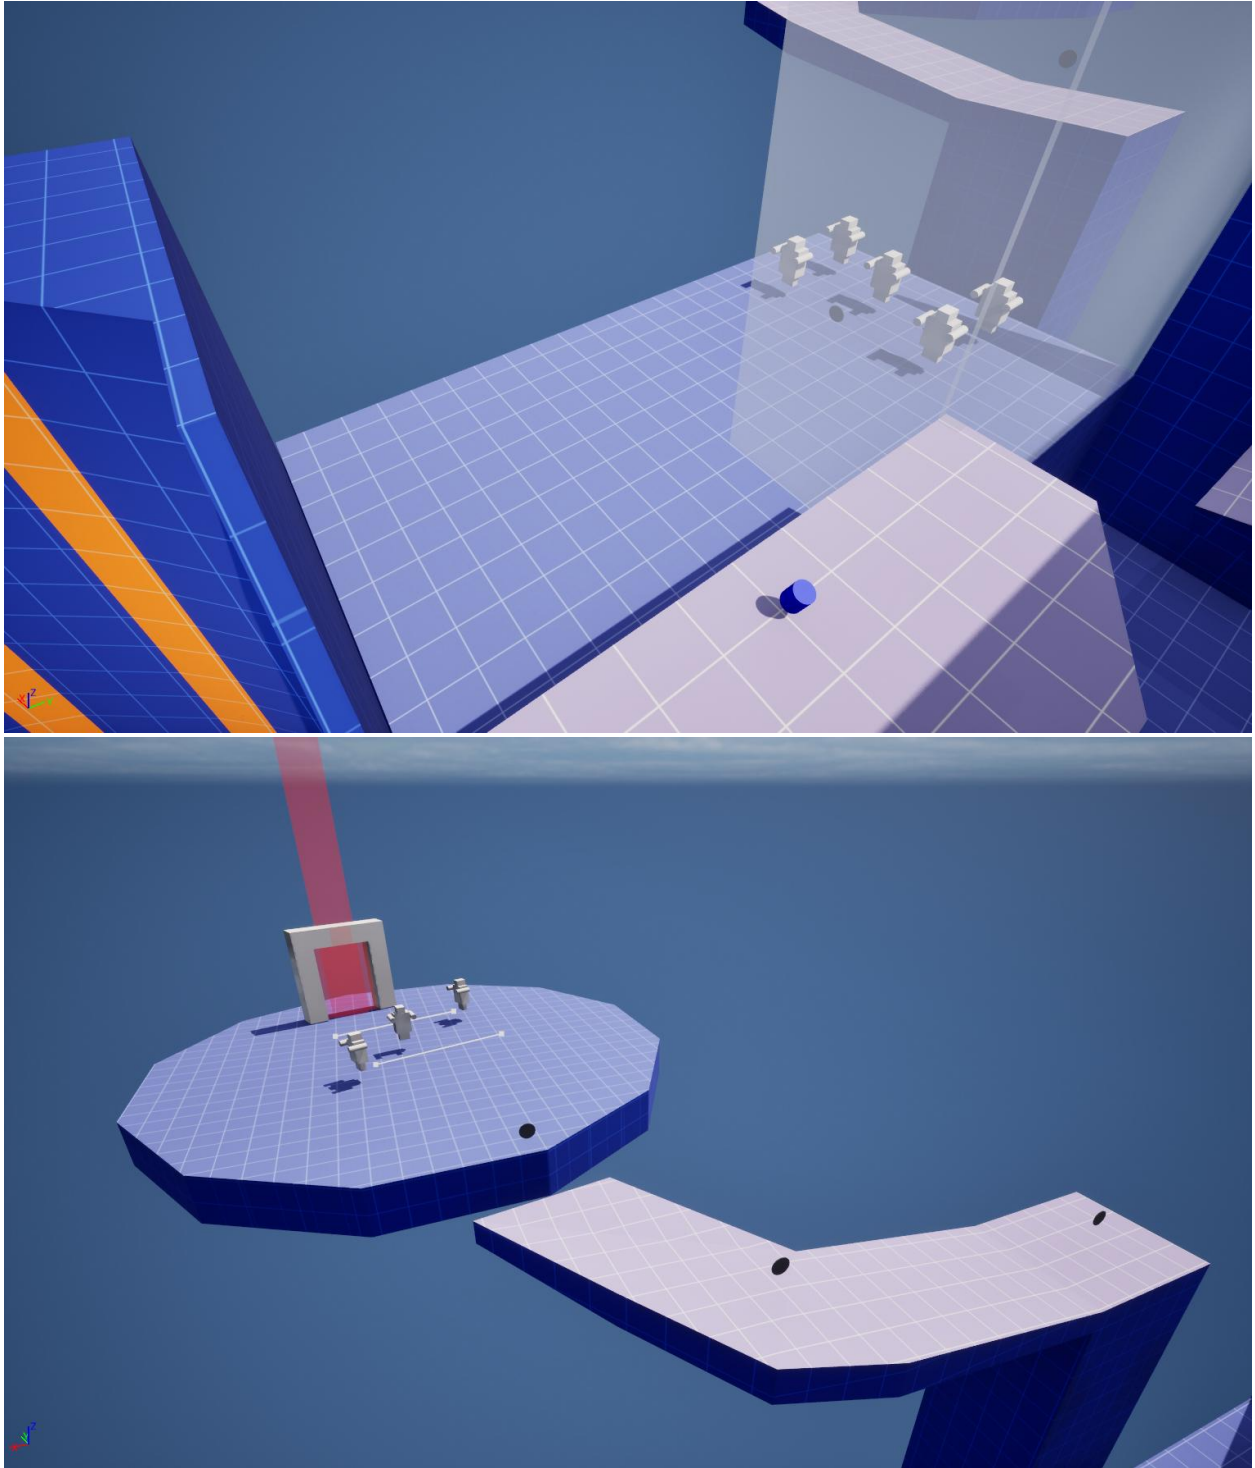

Room 3

Pillars Invoked in this room by priority:

- Elevation
 - This room has multiple instances of where using boost jump is mandatory.
- Tactical
 - All of Baptistie's abilities are in test here, they require being chained to clear the rooms.
- Equilibrium
 - Balancing the use of your abilities & what to focus on first here will determine how quick you get through this area.

The third room is split into 3 areas & they weave all 3 main pillars of this entire course together in harmony testing the player's understanding of the hero, it invokes these pillars in this way:

- Area A, this area first presents the Equilibrium pillar by first prioritizing the threat, then healing from a distance a more difficult ally that moves between glass panels which asks for more precision.

- The next corridor in the same area, presents tactical due to the amount of bots that need healing which forces the player to use the Shift heal ability to go faster.
- To reach Area B the player is forced to use the Elevation pillar, while being elevated the player sees the next challenge/threat & the way to the finish line.
- Area B presents a semi safe space where the player engages with the Tactical pillars by understanding their last ability, the ultimate. The sheer amount of enemies will make the player think about using a big ability & secondary use of the E ability in order to deal with the threat without dying.
- Area C comes right after the previous one and it provides a cooldown moment with minimal threat and presents the home run moment to just go for the finish line.
